Ex. * Kinetic enegy is an expression of the fact that a moving object can do work on anything it hits; it quantifies the amount of work the object could do as a result of its motion.
* Kinetic energy is a scalar quantity.
* The kinetic energy of a moving object, with mass m and velocty v is given by:

$k = 1/2\ mv^2$

* So, kinetic energy is proportional to the square of the velocity.

If the velocity of an object doubles, the kinetic energy increases by a factor of four.
