CIVIL SERVICES PRELIMINARY EXAM

VAJIRAO & REDDY INSTITUTE

India's Top Potential Training Institute for IAS

B

Test Booklet Code: 714 Test Booklet No: 665876 Total Ques: 100

1 D

Ex. - Yardangs are parallel troughs cut into softer rock running in the direction of the wind, separated by ridges. The direction of the yardangs can indicate the direction of the prevailing wind.
- A Zeugen is a tabular mass of resistant rock, standing prominently in the desert.
- It is usually composed of alternating layers of hard and soft rocks.
- Mushroom Rocks and Inselbergs are also created by the erosional work of wind.

2 C

Ex. - Saudi Aramco (Saudi Arabian Oil Company) has discovered several new natural gas fields.
- The new gas fields:
- Central region - Shadoon
- Southeastern region - Shehab and Shurfa
- Northern border with Iraq - Umm Khansar
- Eastern region - Samna
- Two of the gas fields, Samna and Umm Khansar, are "non-conventional".
- Non-conventional deposits, also known as shale, are usually trapped in tight pore spaces, requiring special extraction techniques.

3 C

Ex. - Shale gas refers to natural gas that is trapped within shale formations.
- Shales are fine-grained sedimentary rocks that can be rich resources of petroleum and natural gas.
- Sedimentary rocks are rocks formed by the accumulation of sediments at the Earth's surface and within bodies of water.
- Common sedimentary rocks include sandstone, limestone, and shale.

4 A

Ex. - The Barbara forest is located near Chilika Lake in coastal Odisha touching three districts Khordha, Nayagarh, and Ganjam.
- It is about 5 km away from Banapur, an ancient Buddhist heritage site.
- It is dubbed Asia's largest teak and sal forest.
- It is the only forest in India guarded by the jawans of the Central Reserve Police Force (for protecting forest resources).
- The thick forests of Barbara are inhabited by giant squirrels, making it a major contender to become a sanctuary for giant squirrels.
- One can find other species like sambar, deer, mouse deer, and bison in the forest.

Ex.

15 D
Ex. - Recently, a blueprint for the 'National Coal Gasification Mission' has been prepared by the Union Coal Ministry.
- Coal gasification is the process of converting coal into synthesis gas which is also called as syngas, which is a mixture of hydrogen (H2), carbon monoxide (CO) and carbon dioxide (CO2).
- The syngas technology allows the conversion of non-mineable coal/lignite into combustible gases through in situ gasification of the material.

53 A

Ex. Over 14,500 PM Schools to be built in between FY23 to FY27.
Urban employment nearing pre-pandemic level.

54 B

Ex.

55 B

Ex. According to UNDP's report, 16.4% of the population in India are multi-dimensionally poor.
India ranked 132 out of 191 countries in the 2021/2022 HDI report.

56 D

Ex.

57 A

Ex. All levels of education-Primary, Upper-Primary, Secondary, and Higher Secondary-saw a growth in enrollment, with the exception of Pre-Primary (reduced from 1.1 crore to 1 crore in FY22).

58 B

Ex.

59 C

Ex. WHAT ARE MANGROVES?
• A mangrove is a shrub or a small tree that grows along the coastlines and has roots in salty sediments, often underwater. They also grow in swamps.
• Mangrove forests can survive extreme weather conditions and require low oxygen levels to survive.
• The mangroves cannot survive freezing temperatures and thus are found mainly in tropical and subtropical latitudes.
• UNESCO celebrates July 26 as the International Day for the Conservation of the Mangrove Ecosystem to raise awareness about mangrove ecosystems and to promote their conservation.

60 B

Ex.

61 D

Ex. • The Kolar Gold Fields (KGF), located in the Kolar district of the state of Karnataka, India, are a set of defunct gold mines known for the neutrino particle experiments and observations
• The experiments ended with the closing of the mine in 1992.
• Neutrino-related experiments were started in KGF in 1964.
• The main goal was the detection of atmospheric neutrinos, with an understanding that cosmic rays contain high energy pions and muons which decay in the Earth's atmosphere to produce billions of neutrinos.
• The experiments were conducted by groups from TIFR, Durham University and Osaka University using basic trigger with scintillation counters and Neon Flash Tubes (NFT) for tracking detectors.

69 B
Ex. • Karl Landsteiner is an Austrian-American immunologist and pathologist
• He received the 1930 Nobel Prize for Physiology or Medicine for his discovery of the major blood groups and the development of the ABO system of blood typing
• This discovery has made blood transfusion a routine medical practice.
• Landsteiner discovered the cause of agglutination to be an immunological reaction that occurs when antibodies are produced by the host against donated blood cells.

Ex.

73 B
Ex. • The Central Pollution Control Board (CPCB), statutory organisation, was constituted in September, 1974 under the Water (Prevention and Control of Pollution) Act, 1974.
• Further, CPCB was entrusted with the powers and functions under the Air (Prevention and Control of Pollution) Act, 1981. So statement 1 is incorrect.
• It serves as a field formation and also provides technical services to the Ministry of Environment and Forests of the provisions of the Environment (Protection) Act, 1986. So statement is correct.

74 A
Ex. • Commensalism is a relationship between two organisms where one organism is benefited from the other, whereas the other is neither harmed nor benefited. So option a is correct.
• It is a biological interaction that organisms form, in the quest of food and shelter.
• The commensal, which is the species that benefits from the association may obtain nutrients, shelter, support, or locomotion from the host species, which is unaffected.
• The commensal relation is often between a larger host and a smaller commensal.
• The host organism is essentially unchanged by the interaction, whereas the commensal species may show great morphological adaptation.
